

With generic medicines we benefit everyone

Generic medicines are equivalent to the branded originals. They contain the same active principles, are in the same pharmaceutical presentation and offer the same quality, safety and effectiveness.

Generic medicines are ones you can trust, as their reference standard is the branded originals which have been in the market for at least 10 years, so that their therapeutic effectiveness has been fully proven.

Generic medicines.

Generic Pharmaceutical Equivalent: EFG

Generic medicines are easy to identify, as the name on the container always contains the initials EFG (Generic Pharmaceutical Equivalent).

They are generally known by their active principle (composition) followed by the name of the marketing authorisation holder plus the initials EFG.

Generic medicines are effective.

Compared with its original, a generic medicine:

- Contains the same active principles.
- Is presented in the same pharmaceutical route (tablet, capsule, cream, etc.) and the same form of administration (oral, injectable, etc).
- Meets the same quality standards.

Better for you.

The quality of generic medicines

Generic medicines go through the same quality checks as the original branded medicines. That is, they meet all the requirements for authorisation and undergo the post-marketing checks specified by the Spanish Agency of Medicines and Medical Devices, like all other industrially manufactured medicines for human use.

How is there a saving with generic medicines?

Generic medicines have a low price because the original medicinal research costs are not built into their price.

This lower price means a double saving; on the one hand, the National Health Service can use the saving for other health resources, and on the other, for the people in general, who pay less.

Better for all of us.

Generic medicines are safe

In addition, generic medicines enjoy the advantage of wide experience of use in clinical practice, as their active principles have been in the market a long time.

A generic medicine is therefore:

- Effective.
- Reliable.
- Of high quality.
- Safe.
- Easy to identify.
- A saving for the public and for the National Health Service.

With generic medicines we help to make our health service better.

Generic medicines are safe and using them brings benefits for all of us.
